ORDER FULFILLMENT SOLUTION

Fast-Accurate Scan-Based Order Packing

Another way to streamline and accelerate fulfillment operations is to add the Logistyx Pack-IT solutions to your Ship-IT™ multi-carrier shipping software for fast and accurate scan-based order packing, verification and shipping. Pack-IT is easy to learn, which makes it ideal when onboarding new employees. Pack-IT's accuracy tools have helped many of our customers achieve near-100% order accuracy while dramatically increasing productivity.

FAST AND ACCURATE ORDER PACKING

Logistyx packing software is a flexible solution that delivers fast, accurate order fulfillment.

Users can scan, verify, and close orders in one continuous action, in seconds, in a fraction of the time it takes to pack orders in a manual paper-driven environment.

The system eliminates picking and packing errors, increases labor savings, and provides real-time visibility into orders.

SMART ORDER PACKING FOR DETAILED ITEM TRACKING

Pack-IT combines barcode scanning with intuitive software to make it fast and easy to capture and validate line item details such as SKUs, serial and lot numbers and quantities shipped.
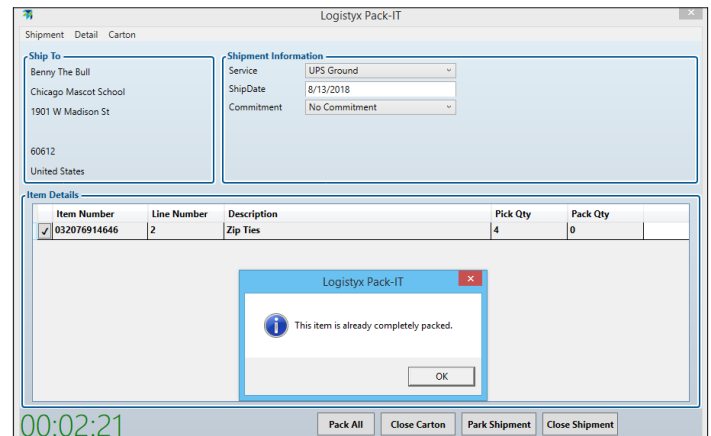

This information can be uploaded to your host systems for inventory planning, customer service and tracking purposes.

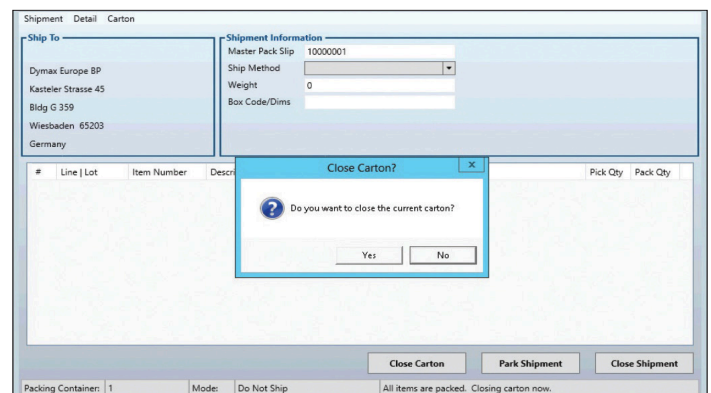

Logistyx order packing software can be deployed with mobile and wearable barcode scanners.

REAL-TIME PREVENTION OF DUPLICATE OR INCORRECT ITEMS

The software guides order packers while they work to eliminate potential packing errors. Audible alerts and pop-up windows prevent the user from packing incorrect quantities or items.

Audible alerts and pop-up windows alert the packer of packing errors such as incorrect quantities or items being added, and prevent the order from being closed until errors are corrected.

The software tracks line items and quantities as they are packed and notifies the user when the order is complete.

EASY TO USE, EASY TO TRAIN

Manual or data-entry intensive order packing routines are replaced with an intuitive, scan-based workflow. Users can scan, pack, and ship with little interruption – greatly accelerating order throughput.

The software is so intuitive that very little training is required. New employees, seasonal or temporary staff can learn to use it in a matter of minutes.
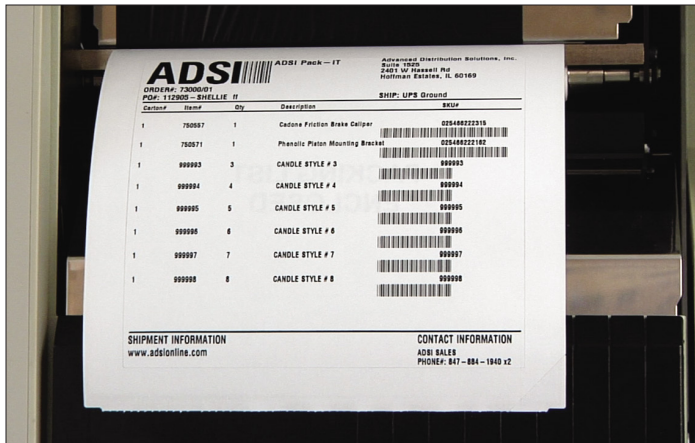

INTEGRATED ASN AND EDI CAPABILITIES

Built in tools make it easy to handle advance ship notice (ASN) requirements.

PACKING SLIP AUTOMATION

Reduce labor and order fulfillment time by configuring the software to automatically generate labels as a seamless step in the process. The packing slip prints; just print and apply. No need to fold, insert or tape the packing slip to the carton.

Completely automate the ASN process.

Simplify the process with a combined packing and shipping label.

One example of many options for carton and packing label formats.

Logistyx Pack-IT software can be configured to produce a wide variety of standard, vendor-compliant and customized labels featuring various line item details, your company's logos, specific data fields and barcodes, and more.

"SCAN, CLICK AND SHIP"

You can accelerate order fulfillment to 10X faster with our integrated order packing and shipping solution. Once the order is closed, a packing slip and carrier-compliant label is printed automatically. Just click and ship.

HOW MUCH CAN YOU SAVE?
